

AYODELE SOWUNMI

Technical Support Engineer | Linux | Infrastructure | Enterprise Security
Lagos, Nigeria | +234 813 686 2292 | ayodele@ayodelesowunmi.com | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Enterprise Technical Support Engineer specializing in Linux systems, infrastructure, and enterprise security platforms. Experienced in customer-facing troubleshooting, root cause analysis, problem reproduction, and technical investigations across production and containerized environments. Partners with customers, software developers, and engineering teams to diagnose complex issues, communicate findings, and deliver reliable technical outcomes. Hands-on experience includes virtualization, container deployment troubleshooting, observability, and technical documentation.

EXPERIENCE

Technical Support Engineer | Apr 2024 - Jun 2026

NXLog | Remote

- Resolved 788 enterprise support cases across NXLog Agent and Platform, troubleshooting Podman/Docker Compose and Kubernetes/Helm deployment methods and the underlying ClickHouse database layer, while maintaining 100% SLA compliance.
- Documented and escalated 58 product defect reports to Engineering, with 78% fixed and released, providing troubleshooting analysis, log evidence, and diagnostic findings.
- Submitted 12 product enhancement proposals informed by customer feedback and support trends, with 6 accepted or shipped.
- Built Python and Bash scripts to automate diagnostic data extraction and recurring support reporting, removing manual steps from the team's standard troubleshooting workflow.
- Authored 10 technical knowledge base articles covering observability, Linux, security, and platform troubleshooting topics, used as first-line reference material ahead of escalation.
- Created and presented an official how-to video series for NXLog Platform covering Suricata, Zeek, and Squid Proxy log collection, plus an Academy episode on log file fundamentals, published on NXLog's YouTube channel ([Suricata](#) · [Zeek](#) · [Squid Proxy](#) · [Academy](#)).

Enterprise Security Solutions Engineer | Aug 2022 - Mar 2024

Tenece Professional Services | Lagos, Nigeria

- Implemented, configured, and supported Imperva Cloud WAF solutions for financial institutions including GTBank, Keystone Bank, and Hydrogen Payment Services, expanding deployments across nine GTBank subsidiaries.
- Supported Professional Services engagements involving Imperva SecureSphere (on-premises WAF), contributing to customer redesign initiatives and solution planning.
- Conducted customer workshops, product demonstrations, and technical presentations covering solution capabilities, deployment requirements, and proposed designs.
- Deployed Proof-of-Concept environments and contributed technical input to RFP responses in collaboration with presales colleagues.
- Coordinated with customer teams and internal business units on Cloud WAF implementations and other enterprise security engagements.
- Led gap analysis, audit coordination, and security awareness training for an ISO/IEC 27001-aligned ISMS implementation that achieved certification.
- Mentored junior engineers through technical guidance and knowledge sharing on security solution engagements.

Technical Support Engineer (L3) | Aug 2020 - Aug 2022

Teknowledge (formerly Tek Experts) | Lagos, Nigeria

- Supported ArcSight SIEM deployments across ESM, Logger, and Smart Connectors for OpenText (formerly Micro Focus) enterprise accounts, investigating log collection, event correlation, and integration issues.
- Maintained continuity of active incident and ticket workflows through a platform migration from HP Service Manager (HPSM) to Salesforce.
- Achieved a 90% customer satisfaction rating and received the team's Best Employee 5 Star Hero Award.
- Performed Linux administration and troubleshooting across RHEL, Ubuntu, and CentOS environments, authoring knowledge base articles used across the support team for repeat issue types.

System Administrator | Dec 2017 - Aug 2020

HollaTags Limited | Lagos, Nigeria

- Administered production Linux servers and hosting infrastructure supporting web hosting, email hosting, SMS, USSD, and APIs in LAMP environments.
- Managed DNS configuration and monitored production Linux and Windows systems, contributing to 99.9% service availability.
- Configured and troubleshooted VPN connections between clients and telecom operators.
- Collaborated with software developers to investigate infrastructure and platform issues affecting bulk SMS, USSD, and API services.

- Provided customer-facing technical support, onboarded new clients, and coordinated telecom and hosting escalations within response-time and SLA targets.
- Authored knowledge base articles that increased customer self-service adoption by 75% and reduced repeat ticket volume.

TECHNICAL WORK

Proxmox Linux Template Automation (Case Study · Repository)

- Evolved a personal Proxmox VE homelab from manually creating and cloning VMs into a repeatable Linux template workflow, built to support faster lab reproduction for NXLog testing and troubleshooting.
- Built first-boot automation with Cloud-Init covering guest configuration and DNS registration, using CoreDNS to separate static records from automation-managed records.
- Validated the workflow across 5 Proxmox template configurations, with direct clone testing performed on RHEL 8 and RHEL 9.
- Extended the workflow to include first-boot NXLog Agent deployment and Platform auto-enrollment, enabling fully provisioned test environments from a single template clone.
- Published a sanitized implementation repository with scripts, tests, configuration examples, and documentation, including validation scope and known limitations.

Megarr

- Built Megarr, a Bash-based automation and orchestration tool coordinating MEGA, MEGAcmd, Docker, Gluetun VPN, and Sonarr/Radarr into an automated media acquisition pipeline.
- Added health monitoring, queue management, and retry/recovery logic, with a CLI for day-to-day operation and troubleshooting.

Security & Observability Lab

- Built a personal lab using NXLog, Zeek, Suricata, Squid Proxy, Nginx, Prometheus, and Grafana to reproduce customer-reported issues encountered in NXLog support cases.
- Used the lab as the filming environment for NXLog's official how-to video series (see Experience).

SKILLS

Enterprise Technical Support: Customer-facing troubleshooting, root cause analysis, problem reproduction, technical investigations, defect escalation, technical documentation

Linux, Networking & Infrastructure: Linux administration (RHEL, Ubuntu, CentOS), LAMP environments, DNS, VPN, web and email hosting, production monitoring

Virtualization & Containers: Proxmox VE, Cloud-Init, Docker and Docker Compose, Podman, Kubernetes/Helm deployment troubleshooting

Enterprise Security & Observability: SIEM and WAF support, ArcSight ESM/Logger/Smart Connectors, Cloud WAF implementation and support, Imperva SecureSphere engagement support, ISO/IEC 27001 ISMS, NXLog, Zeek, Suricata

Scripting & Technical Integration: Python, Bash, REST APIs, Git

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- ISMS Lead Implementer (ISO/IEC 27001:2022)
- Linux Foundation Certified System Administrator (LFCS)
- Microsoft Azure Fundamentals
- ArcSight ESM Administrator

EDUCATION

HND Computer Science, Lagos State Polytechnic - 2015
